

## **InfoSign Media launches the ServDentist DX-3D Patient Education Software**

February 13 2014, Montreal, Quebec: InfoSign Media, the leading provider of networked digital television content for dental offices, and Studio Sinexus, an innovative avant-garde company in the field of visual arts and 3D animation, today released a new revolutionary Patient Educational Solution for dental treatment rooms, called the ServDentist DX-3D.

ServDentist DX-3D is an easy-to-use interface that includes interactive 3D models. The tool enables dentists to effectively communicate the value and impact of proposed treatment plans in less than 30 seconds.

With ServDentist DX-3D, dentists now have access to multiple procedures from any desktop, laptop or tablet (iPad) in their offices through an Internet connection.

In addition to having zoom and full, 360 degree control over 3D models, ServDentist DX-3D offers animated clips that you can send to your patients via email, with the option of including personalized anonymous surveys. Survey results are also automatically updated for you in ServDentist DX-3D!

InfoSign Media is offering ServDentist DX-3D on a free 30 day trial basis. “We felt making ServDentist DX-3D available via the Internet was the next logical step in the development of the product and the service. We believe our dental customers will respond enthusiastically, especially with the new innovative 3D model”, said Yves Corsi, President of InfoSign Media.

### **About InfoSign Media**

InfoSign Media offers visual communication solutions designed specifically for the waiting and treatment rooms and web sites of dentists, orthodontists and denturists. Well-known for its unique approach and the quality of its contributions, InfoSign Media produces and distributes ready-to-go, digital TV signage, with dynamic and interactive content. With more than 500 projects to its credit, InfoSign Media works closely with its clients and partners to offer innovative visual communications solutions.
